August 14, 2015

To Potential Rugged Roof Metal Building Customers,

My company owns a 10,000 square foot metal building containing office space with important oil and gas documents and files along with expensive CNC equipment with which we manufacture GBE-Eagle brand equipment that applies corrosion prevention tape over/on oil and gas pipelines.

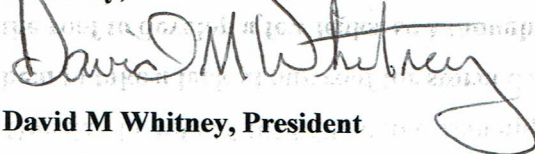

One day in July of 2015 Chad and Dan approached me on a cold call to ask if it was ok for them to take a look at our roof for storm damage. We had a few spring storms which caused the roof to develop a few leaks, so I thought; they look ok; why not.

To make the story short they came back to me with pictures showing hail damage from the storm we had in March 25, 2015. They help us make the insurance claim, and they met with the adjustor to point out the damage. All they asked in return was that I let them do the repair work when we received the money. I agreed.

It wasn't much longer until we received a substantial check from the insurance company. Rugged Roof had already secured all the material used to replace sky lights, begun the prep work by power washing the roof and ordered the coating they would be spraying on the roof.

Overall the experience was terrific. Chad, Dan and Tim, their operations manager did exactly what they promised. The roof looks and functions great. We no longer have any leaks and the reflective property of the white coating material keeps the building cooler and has reduced my electric bills substantially. I would highly recommend the Rugged Roof team to every owner of a metal roof building.

Sincerely,

David M Whitney, President
